

## Intelligent Buildings Powered over Ethernet

Randy Butler  
RCDD™, LEED® Green Associate, ILFI Ambassador  
*Superior Essex Communications*

## Safe to Deploy & Maintain

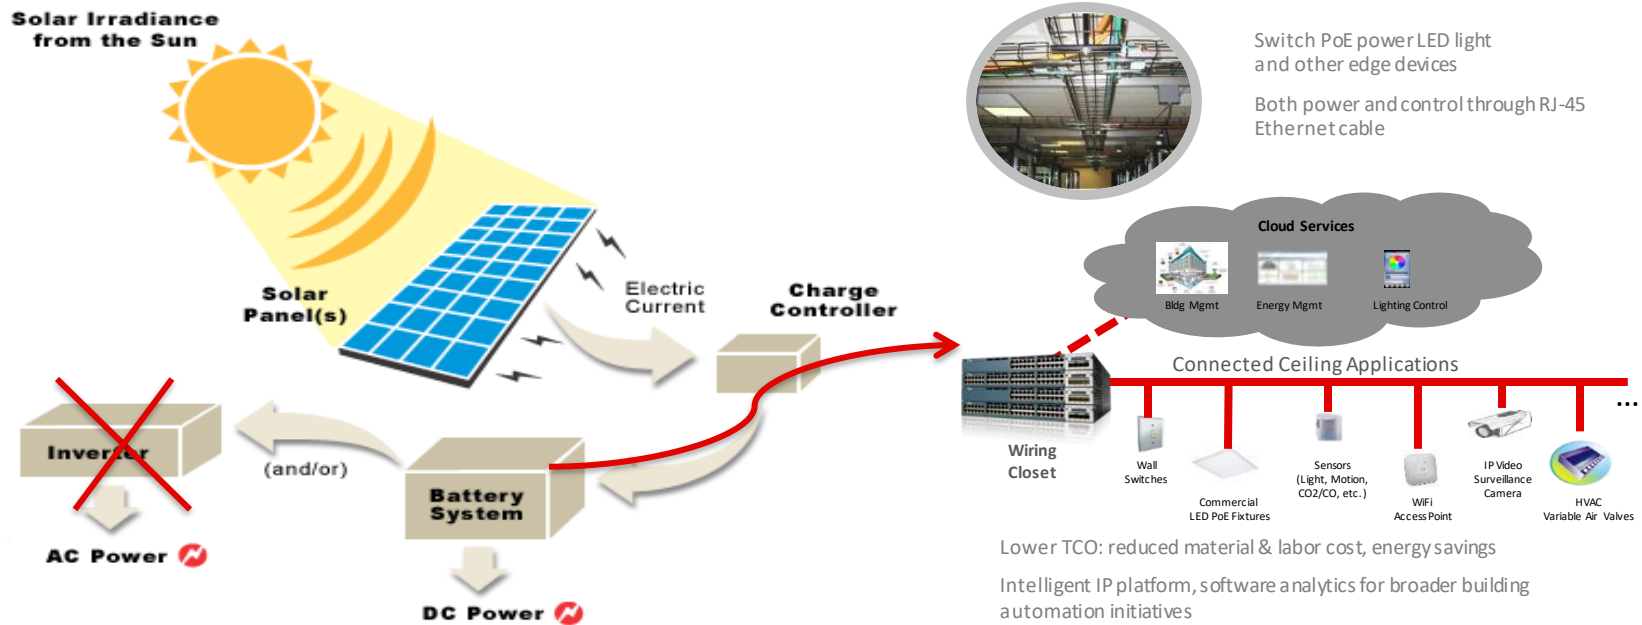

## Easy to Install

Installing LED light fixtures that are Powered Over Ethernet (POE) is much easier

# Efficient

POE devices are an efficient way of taking DC power directly from renewable energy sources.

integer **Advanced Cable**  
**North America**

# Reliable and Secure

POE networks are secure by using edge computing and unikernal VMs to isolate systems from potential cyber security risks

# PoE and Sustainability...How they work together.

USGBC has recently released a LEED pilot credit for using DC power to save energy usage

Enablement of Employee Workspace

Productivity

Network Products with Attributes

Energy Efficiency

New LEED pilot credit encourages energy savings with DC power systems

# The Building of the Future is here, now

Intelligent Buildings of today are easier to install, safer to use, more efficient, more reliable and directly support healthy built environment.
